SUMMARY

AI Product Engineer with a decade of TypeScript experience, building on React since 2016 and Next.js since 2018. I was often the first frontend hire, owning architecture, tooling, component libraries, and delivery pipelines, then helping grow the team through hiring, onboarding, and playbooks.

Most of my work has been dashboards, product platforms, and proprietary data explorers for cybersecurity, crypto, and gaming. I have built with AI since Copilot and ChatGPT, moving from prompt and context engineering to agent skills, harnesses, and automations.
