PROFILE

AI product engineer focused on TypeScript products, data-heavy interfaces, and agent-enabled workflows. Professional frontend engineering since 2015, React since 2016, Next.js since 2018, and a source-stated decade of TypeScript experience.

Often the first frontend hire: owns architecture, tooling, design systems, CI/CD, component libraries, onboarding, and the playbooks that let teams scale around the product.

Strongest domain pattern: dashboards, product platforms, proprietary data explorers, cybersecurity products, crypto tooling, gaming platforms, and AI harnesses that turn messy data and workflows into usable software.
